Discussion

Angular 4 is a JavaScript framework for building web applications and apps in JavaScript, html, and TypeScript, which is a superset of JavaScript. Angular provides built-in features for animation, http service, and materials which in turn has features such as auto-complete, navigation, toolbar, menus, etc. The code is written in TypeScript, which compiles to JavaScript and displays the same in the browser.

Audience

This tutorial is designed for software programmers who want to learn the basics of Angular 4 and its programming concepts in a simple and easy manner. This tutorial will give you enough understanding on the various functionalities of Angular 4 with suitable examples.

Prerequisites

Before proceeding with this tutorial, you should have a basic understanding of HTML, CSS, JavaScript, TypeScript, and Document Object Model (DOM).
